DESCRIPTION OF PRODUCT: Straitjacket with full length sleeves which secure behind the patient.

Indications for Use:
- Patients assessed as being in extreme danger of injury to themselves or to others.

Contraindications:
- **DO NOT** use this device on a patient who is or becomes: suicidal; highly aggressive or combative; self-destructive; or deemed to be an immediate risk to others, UNLESS the patient is under constant supervision.
- **NEVER** use on a patient:
  - With a dislocation or fracture on the restrained limb; or
  - If an IV or wound site could be compromised by the device. See the Posey Catalog for other options for such a patient.
- **DO NOT** use on patients with: ostomy, colostomy, or G-tubes; hernias, severe Cardio Obstructive Pulmonary Disease (COPD); or with post-surgery tubes, incisions or monitoring lines. These could be disrupted by a restraint.

Adverse Reactions:
- Severe emotional, psychological, or physical problems may occur: if the applied device is uncomfortable; or if it severely limits movement. If the patient is likely to cause injury to him/herself or others, get help from a qualified medical authority to find an alternate intervention or method of restraint.

Application Instructions:

**WARNING**
- Before each use, check for tears, fraying or excessive wear; or cracked or broken buckles or locks; and/or that hook and loop adheres securely. Discard if device is damaged.
- If you have any questions about patient safety, ask the appropriate medical authority for alternatives.
- Make sure patient wears proper undergarments to protect skin.

1. With the opening at the back, put the patient’s arms through the sleeves.
2. Close the back by feeding the ends of the straps through each of the four corresponding buckles.
3. Cross the patient’s arms in front, and pass each arm through the vertical loop at chest level.
4. Pass each arm through the vertical loops located on the sides of the jacket underneath the arm.
5. Secure the two sleeve ends behind the patient’s back using the attached straps.
6. Pass the pelvic strap between the patient’s legs and secure with the buckle behind the patient’s back.
7. Check all straps to ensure they are snug enough to prevent escape, but do not interfere with circulation or breathing.

**WARNING**
- Posey recommends constant direct supervision for patients deemed to be at risk of injury to themselves or others. For times when direct supervision is not possible, monitor by line of sight or by a video/audio device.
- **NEVER** allow a patient to have access to any tool, utensil, or object that might be used to unlock or damage cuffs.
- Be aware that a sudden mood swing may cause agitated or aggressive behavior. Contact the medical team AT ONCE if this occurs. No level of monitoring may avoid the risk of serious injury to highly agitated or aggressive patients.
- Check the patient’s limbs, circulation and breathing frequently. If this device is too tight, circulation or breathing will be restricted. If too loose, the patient may be able to escape.
- **NEVER** allow a restrained patient to walk without assistance. The patient is at risk of injury from a fall or harm from others.

ADDITIONAL SAFETY AND LAUNDERING INSTRUCTIONS ON OTHER SIDE
How to Tie the Posey Quick-Release Tie

1. Wrap the strap once around a movable part of the bed frame leaving at least an 8” (20 cm) tail. Fold the loose end in half to create a loop and cross it over the other end.
2. Insert the folded strap where the straps cross over each other, as if tying a shoelace. Pull on the loop to tighten.
3. Fold the loose end in half to create a second loop.
4. Insert the second loop into the first loop.
5. Pull on the loop to tighten. Test to make sure strap is secure and will not slide in any direction.
6. Repeat on other side. Practice quick-release ties to ensure the knot releases with one pull on the loose end of the strap.

WARNING: ALWAYS Monitor patients per facility policy.
Improper application or use of any restraint may result in serious injury or death.

1. ALWAYS monitor patient per facility policy. Be aware that changes. NEVER apply any product that you feel is unsafe. Consult with the proper medical staff that worked in the past may be inappropriate if the patient’s mental or physical health status

NOTE:
• A restraint must only be used in accord with the patient’s Individualized Care Plan (ICP). The ICP is an assessment by an interdisciplinary team, which may include, but is not limited to: PT, OT, Nursing, the Physician, Social Services. The ICP should include: restorative nursing; patient and physician review and evaluation of their physical and psychological status.

STAFF TRAINING:
Staff must have on going training and be able to demonstrate competency to use this device in accord with Posey instructions; your facility policies and state and federal regulations [Federal Register, Part IV, 42 CFR Part 482.13(e)(5) and (f)(6)]. Posey offers inservice training aids at no charge. Contact Posey online at www.posey.com or call toll-free at 1.800.447.6739 (press 5).

SELECTING THE RIGHT POSEY PRODUCT:
Refer to the Posey catalog to help select the right device to meet individual patients’ needs.

BEFORE APPLYING ANY RESTRAINT:
• Make a complete assessment of the patient to ensure restraint use is appropriate.
• Identify the patient’s symptoms and, if possible, remove the cause. You may need to: cater to individual needs and routines; increase rehabilitation and restorative nursing; modify the environment; or increase supervision.
• Use a restraint only when all other options have failed. Use the least restrictive device, for the shortest time, until you find a less restrictive alternative. Patients have the right to be free from restraint.
• Obtain informed consent from the patient or guardian prior to use. Explain the reason for restraint use to the patient and/or guardian to help ensure cooperation.
• A restraint must only be used in accord with the patient’s Individualized Care Plan (ICP). The ICP is an assessment by an interdisciplinary team, which may include, but is not limited to: PT, OT, Nursing, the Physician, Social Services. The ICP should include: restorative nursing; patient release; and pressure sore prevention.

NOTE: Just as patient behavior is not 100% predictable, no product is 100% foolproof. Patient safety requires regular reassessment and monitoring per facility policy. A product that worked in the past may be inappropriate if the patient’s mental or physical health status changes. NEVER apply any product that you feel is unsafe. Consult with the proper medical authority if you have questions about patient safety.

ADDITIONAL WARNINGS:
1. ALWAYS monitor patient per facility policy. Be aware that constant monitoring may be required for:
   • Aggressive or agitated patients; and
   • Patients deemed at risk of aspirating their vomit. This includes patients in the supine position, or who are not able to sit up. If the patient vomits, he or she could aspirate the vomit and suffocate.
   • Be prepared to intervene at the first sign of danger. Such patients require frequent review and evaluation of their physical and psychological status.

2. NEVER alter or repair this product. ALWAYS Inspect before each use: Check for broken stitches or parts; torn, cut or frayed material; or locks, buckles, or hook and loop fasteners that do not hold securely. DO NOT use soiled or damaged products. Doing so may result in serious injury or death. Dispose of damaged products per facility policy for BIOHAZARDOUS material.

3. ALWAYS secure straps, to a movable part of the bed or chair frame, out of the patient’s reach, using quick-release ties (see drawing below) or buckles. These allow easy release in the event of an accident or fire. Test to make sure straps cannot tighten, loosen, or slip and create excess slack. If this occurs, the patient may slide off the chair or bed, increasing the risk of serious injury or suffocation. Restraint release is an important part of facility fire and disaster drills. Straps can be cut with scissors in an emergency.

4. NEVER use Posey products on toilets, or on any chair or furniture that does not allow proper application as directed in the Application Instructions. DO NOT use at home.

5. NEVER expose this product to open flame, fire, smoking materials, or high heat sources. Some products may melt or ignite and burn. The facility smoking/no smoking policy should be strictly enforced.

6. NEVER use a Posey product as a seat belt in a moving vehicle. Posey products are not designed to withstand the force of a crash or sudden stop.

LAUNDERING INSTRUCTIONS (if applicable):
• Fasten all buckles and locks to reduce risk of damage during wash and dry cycles. DO NOT put buckles or locks through extractors. For maximum life, launder in a laundry bag.
• Before laundering, zip up and turn the product inside out to protect zipper.
• Hook and loop fasteners may collect lint after repeated use or laundering, reducing grip strength. Fasten the “hook” to the “loop” before laundering to help prevent lint buildup. As needed, use a stiff-bristle brush to remove lint from the “hook” side.
• These products, other than foam products, can be machine washed under CDC* guidelines for material soiled with blood or bodily fluid.
• For non-contaminated material, use lower temperature wash and dry cycles to extend product life.
• For foam products:

A WARNING
Test Zippers or hook and loop fasteners before each use. DISCARD device if it does not fasten securely.

STORAGE AND HANDLING:
• This device is designed for use in normal indoor environments.
• This device may be stored in ambient warehouse temperatures at normal humidity levels. Avoid excess moisture or high humidity that may damage product materials.

How to Tie the Posey Quick-Release Tie

1. Wrap the strap once around a movable part of the bed frame leaving at least an 8” (20 cm) tail. Fold the loose end in half to create a loop and cross it over the other end.
2. Insert the folded strap where the straps cross over each other, as if tying a shoelace. Pull on the loop to tighten.
3. Fold the loose end in half to create a second loop.
4. Insert the second loop into the first loop.
5. Pull on the loop to tighten. Test to make sure strap is secure and will not slide in any direction.
6. Repeat on other side. Practice quick-release ties to ensure the knot releases with one pull on the loose end of the strap.
